

U.S. Appln. No.
Atty. Docket No.:

Amendments to the Specification

Please replace the paragraph [0045] of the published application (US 20070198137) with the following paragraph:

If by means of input device 26 according to FIG. 2 a requirement is sent out for the optical illustration of an information item concerning the operation of the motor vehicle, then the output control part 40 by means of a request 55 in a format that can be generated by the output control part 40 requests the interface module 25 to supply this information concerning the operation of the motor vehicle. A process, explained below with reference to FIG. 4, is implemented in the interface module 25. Said process starts with a (cyclical) inquiry 70 as to whether an information item [[54]] 55, transmitted from the output control part 40, was received. If that is so, then inquiry 70 is followed by inquiry 71; otherwise, inquiry [[71]] 70 takes place again.
